What makes Stw software unique?

Complete Browser-Based Solution
Software Leasing

Annual contract covers:
Telephone support
Application software updates
Use of the application software
Low-cost Browser Access

Lower Total Cost of Ownership

High levels of functionality and flexibility add up to a lower total cost of ownership. Centralized deployment allows efficient software administration and reduces the need to configure individual desktops
Rich security features protect valuable information assets
Fast, easy migrations of existing desktop configurations and automation/customization scripts reduce transition costs
A common, intuitive user interface reduces support calls and additional training

Stw is committed to providing local governments with software and support that they need and require.

Stw works exclusively with local governments; as a result, we are able to interface with 3rd party software and services to provide a total solution for your financial needs.

Stw will keep pace with current technology to keep our clients up-to-date with market and industry changes. Stw application software will continue to develop and embody all that we learn from our experiences.

Browser-Based Solution

The browser-based solution is a hosted system and can be accessed from any operating system using a web browser application.

Our server-based solution requires no additional software on the client workstation, resulting in a reliable and cost-effective application.
